- **Efficient Verification of Neural Networks:** Formulate the verification problem as a semi-definite programming scheme and resolve it with linear matrix inequality.

Vision AI Department, Meituan

Jul. 2020 - Feb. 2021

Machine Learning Engineer

Beijing, China

- **AutoVision:** A platform to automatically conduct neural architecture search, model compression and hyperparameters optimization.
- **Memory-Efficient Neural Architecture Search:** Propose a training scheme to eliminate the performance collapse in memory-efficient fashion. *Awarded with the highest level patent in 2020.*

CADMO, ETH Zürich

Sep. 2021-

RA advised by Prof. Emo Welzl

- **Unique Sink Orientation and USO Polytope:** Probe the combinatorial structure of all the USOs of the same cube, and characterize the symmetric difference map between any ordinary USO and the uniform USO. Figure all the affine transformations under which the USO polytope remain the same.
- **Hidden Points and Hidden Vertices in Class of Polygons:** Introduce novel techniques such as convex/reflex chains and continuous visibility graph, and find solutions for spiral polygons, funnel polygons, pseudo-triangles, fan-shaped polygons, and staircase polygons. Propose the first approximation scheme for hidden points in polygon with holes.
